College Name: Sri Sai Ram Engineering College

Team Name : Cloud Ninjas

Team Member Details (Please provide name, official email id)

1)Dhaanish Ahmed J - sec22ec039@sairamtap.edu.in

2)Kishore Kumar D -sec22ec153@sairamtap.edu.in

3)Aditi Sagesh- sec23am040@sairamtap.edu.in

4)Aishwarya V - sec23cs236@sairamtap.edu.in

Agenda

- Problem Statement
- Expected Solution
- Technical Architecture
- How is Cloud Service Used (Minimum 1 aws service to be used)
- Tech Diagram, Stack & GitHub Repo Link

Problem Statement

- **Engineering students often face significant challenges in planning and executing their academic and career development effectively.**
- **Despite access to numerous online resources and courses, students struggle due to:**
 - **Lack of a structured, year-wise learning roadmap**
 - **Difficulty in selecting the right specialization or domain**
 - **Limited awareness of current industry demands and emerging technologies**
 - **Skill gaps between academic curriculum and job market expectations**
 - **Delayed preparation for internships, projects, and placements**
 - **Absence of personalized guidance and continuous performance evaluation**
 - **Currently, there is no integrated AI-driven system that evaluates a student's knowledge level, identifies skill gaps, aligns learning with real-time market trends, and provides progressive guidance from the first year through final placements.**
- **As a result, many students graduate without industry-ready skills, practical exposure, or strategic career direction.**

Expected Solution

- To address the lack of structured and personalized career guidance among engineering students, the proposed solution is an AI-driven personalized learning and career development platform designed specifically for engineering students.
- The system will:
 - Analyze each student's academic year, existing knowledge, skills, and interests
 - Identify skill gaps by comparing current competencies with industry requirements
 - Generate a structured, year-wise roadmap tailored to individual goals
 - Provide domain-specific course recommendations and project guidance
 - Align learning paths with real-time job market trends and hiring demands
 - Support internship discovery, resume enhancement, and interview preparation
 - Conduct periodic assessments to track progress and improve readiness
- The platform will function as a continuous AI mentor, guiding students from foundational learning in the first year to placement preparation in the final year, ensuring they graduate with industry-ready skills and strategic career direction.
